As a consequence of the rapid proliferation of commercial gambling in Western-style democracies, governments and ... a complex array of economic, social and cultural harms associated with this expansion. This book focuses specifically on ... problems of poverty in ways that fit more closely with the ways in which national elites understand their world. Nor do most of them believe that there is a viable solution to poverty through the market economy in the foreseeable future. The authors of this book assert that, if effective policies are to be put in place, the national elites who control governments and economies need to be convinced of both the reasons why reducing poverty is in their own and the national interest, and that public action can make a significant difference. The need for a new approach to poverty is a major theme in this book. It is one of a rapidly growing literature on poverty, this volume is the first to use survey techniques to explore Third World elites' attitudes to poverty. Five cases - intended to be broadly representative of the diversity of situations in which they live and work. While the authors found major differences in how elites in different countries viewed poverty, they also found that there were some common themes, including a huge importance of presenting the problem of poverty in ways that fit more closely with the ways in which national elites understand their world. Moral unresponsiveness occurred when the nurses either ignored or were unaware that their failure to act on their moral beliefs constrained their moral decision-making. Inexperience and apathy contributed to this unresponsiveness.

Moral distress occurred when nurses knew the morally appropriate action but did not have the necessary skills or resources to carry out that action. Feelings of helplessness, inadequacy, powerlessness, frustration, and fear of retaliation were common responses to moral distress.

The importance of both physician's and nurse's roles in resolving moral conflicts was highlighted. Moral courage and trust in the teaching and skills of the medical profession were essential. In addition, moral distress and moral unresponsiveness impeded these nurses' ability to be resolute in their advocacy.

Effective team interactions, especially support from and collaboration with colleagues, mutual trust and respect, were key factors in maintaining moral integrity. Physicians personally---not just professionally, effective physician-nurse communication, and the recognition of the importance of both physician's and nurse's roles in resolving moral conflicts; (f) moral courage; and (g) a trust in the teaching and skills of the medical profession were essential. In addition, moral distress and moral unresponsiveness impeded these nurses' ability to be resolute in their advocacy.

In the context of this study, five nurses were described as exemplars. Nurses are more likely to act on their moral beliefs and remain resolute when they possess the following factors, in combination, or infrequently in isolation: (a) strong emotions from the nurse including joy, compassion, fear, anger, sadness, anxiety, grieving, discomfort, and physical anguish; (b) an ethic of caring; (c) a focus on patient beliefs and principles, including: beneficence, nonmaleficence, justice, autonomy, and veracity; (d) a focus on patient joy, compassion, fear, anger, sadness, anxiety, grieving, discomfort, and physical anguish; (e) effective team interactions, especially support from and collaboration with colleagues, mutual trust and respect, were key factors in maintaining moral integrity. This phenomenological, qualitative study described the moral decision-making of 16 registered nurses who work within acute care environments to gain an understanding of the processes for compromising or maintaining moral integrity. Seven themes emerged from the nurses' exemplars. Nurses are more likely to act on their moral beliefs and remain resolute when they possess the following factors, in combination, or infrequently in isolation: (a) strong emotions from the nurse including joy, compassion, fear, anger, sadness, anxiety, grieving, discomfort, and physical anguish; (b) an ethic of caring; (c) a focus on patient beliefs and principles, including: beneficence, nonmaleficence, justice, autonomy, and veracity; (d) a focus on patient joy, compassion, fear, anger, sadness, anxiety, grieving, discomfort, and physical anguish; (e) effective team interactions, especially support from and collaboration with colleagues, mutual trust and respect, were key factors in maintaining moral integrity. It is the aim of this book to address this gap, and to enrich the scholarly conversation in this area.
